

Best Practices Workshop

Core Sessions

Monitoring Point Deployment

Total Time: 4 Hours

- Planning placement based on network architecture for maximum coverage
- Hardware and VM configuration
- Maintenance best practices to automate firmware upgrades and alert on disconnections and failures

AppNeta Monitoring Configuration

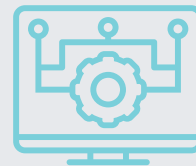

Total Time: 4 Hours

- Core concepts and best practices of AppNeta monitoring methodologies
- Creation of network and web application monitoring
- Configuration of alerting
- Scaling with templates and API endpoints

Incident Response

Total Time: 4 Hours

- Overview of AppNeta integrations (i.e. ServiceNow and PagerDuty)
- How to investigate an incident using AppNeta
- Root cause analysis & MTTI
- Creating workflow runbooks

Accelerated Sessions

Advanced Network Monitoring
Advanced Web App Monitoring
Advanced Traffic Analysis
Configuring Alerts and Notifications
Configuring Dashboards and Reports
